02. Sectors of Economy

1. How does the public sector contribute to the economic development of a nation?

The public sector contributes by:

- Providing essential services like education, healthcare, transport and electricity.
- Developing infrastructure such as roads, railways and dams.
- Providing employment to people.
- Undertaking activities that require huge investment and are not always profitable for private companies.

2. Why is NREGA also called Right to Work?

NREGA (National Rural Employment Guarantee Act), now known as MGNREGA, guarantees 100 days of wage employment in a year to rural households whose adult members are willing to do unskilled manual work. Hence, it is called the Right to Work.

3. Explain the interdependence of all three sectors with an example of sugarcane.

- Primary sector: Farmers grow sugarcane.
- Secondary sector: Sugar mills use sugarcane to produce sugar.
- Tertiary sector: Transport, storage, banking and communication services help in producing and selling sugar.
  Thus, all three sectors are interdependent.

4. "The problem of underemployment is not confined only to agriculture." Explain with an example.

Underemployment can also occur in the service sector. For example, five people may be working in a small shop when only two are actually needed. If some workers leave, the shop's production may not decrease. Such workers are underemployed.

5. Differentiate between final goods and intermediate goods. How do they help in calculating GDP?

- Final goods: Goods purchased for final use and not for further production, e.g., a bicycle bought by a consumer.
- Intermediate goods: Goods used as inputs for producing other goods, e.g., sugar used by a bakery.

Only the value of final goods and services is included while calculating GDP. This prevents double counting.

6. Explain any three measures to solve underemployment.

1. Irrigation facilities can help farmers grow more crops throughout the year.
2. Small-scale industries can be set up in rural areas to provide additional employment.
3. Better infrastructure and education can create more employment opportunities in both rural and urban areas.

02. Sectors of Economy

7. What is GDP? How is GDP measured in India?

GDP (Gross Domestic Product) is the total value of all final goods and services produced within a country during a particular year.

In India, GDP is measured by calculating the value of final goods and services produced by the primary, secondary and tertiary sectors during a year.

8. Describe the importance of the primary sector in the Indian economy.

- It provides food and raw materials.
- It provides employment to a large number of people.
- It supplies raw materials to industries.
- It contributes to the country's income and supports the other two sectors.

9. Why is the importance of the tertiary sector rising?

The tertiary sector is becoming more important because:

- Basic services like education, healthcare, transport and banking are increasingly needed.
- Growth of agriculture and industries creates demand for transport, storage, communication and trade.
- With higher incomes, people demand more services such as tourism, restaurants and private healthcare.
- New services like IT and communication have developed rapidly.

10. How can employment be increased in rural and urban areas?

Rural areas:

- Improve irrigation and promote multiple cropping.
- Set up small-scale and agro-based industries.
- Improve roads, storage and transport facilities.

Urban areas:

- Promote industries and small businesses.
- Develop education, healthcare, IT and other services.
- Provide skill training and better employment opportunities.

11. Differentiate between private and public sectors.

Public Sector	**Private Sector**
i. Owned by the government.	i. Owned by individuals or companies.
ii. Main aim is public welfare.	ii. Main aim is usually profit.

- Aayan

Public Sector	Private Sector
iii. Government controls its activities.	iii. Private owners control its activities.
iv. Example: Indian Railways.	iv. Example: Reliance Industries.

12. Describe any five conditions for the acceptance of a job in India.

People may look for:

1. Good salary or wages
2. Job security
3. Paid leave
4. Safe and healthy working conditions
5. Other benefits such as provident fund, medical facilities and pension.

13. Differentiate between organised and unorganised sectors.

Organised Sector	Unorganised Sector
i. Registered with the government.	i. Generally, not registered.
ii. Follows government rules and regulations.	ii. Often does not follow all government rules.
iii. Provides job security.	iii. Usually has little or no job security.
iv. Workers generally get paid leave and other benefits.	iv. Workers often do not get such benefits.
v. Working hours are generally fixed.	v. Working hours may be irregular.

14. Who are casual workers?

Casual workers are workers who are employed on a temporary basis, usually for a specific period or task, and are generally paid wages on a daily or regular short-term basis.

15. Define per capita income and national income.

Per capita income: The average income of a person in a country. It is calculated by:
Per capita income = National income ÷ Total population

National income: The total income earned by all the residents of a country from their economic activities during a given period, generally one year.
